1 Getting Started

1.1 Welcome!

Welcome! You have just landed on our playing card management and exchange website! The first thing you need to know is that the supported games you can play are Pokèmon[®], Magics[®] and Yu-Gi-Oh[®]. Even if you are currently just a visitor, you can already see and filter all the cards in the catalog, you have only to select one of the three available games:

But we bet you will soon become our user so you can make the most of all the potential our app has to offer! If you click on any card, in the "Open Detail" button, you will see all the details relating to that specific card:

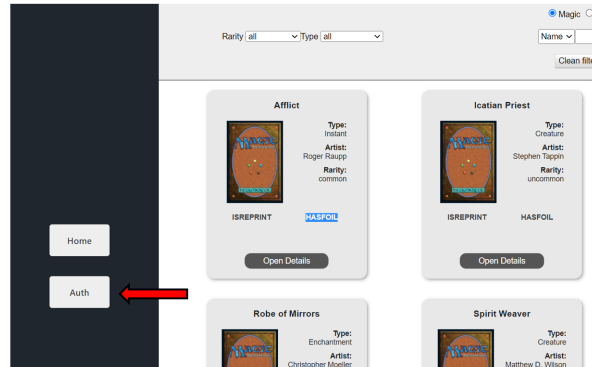

Only if you are a logged in user, from here you can add the card to one of your decks (see "Add card to one of yours decks" subsection) or see which other users own or want this card.

You can also use the filters at the top of the screen, which vary according to the game selected: after you have selected the filters you want to apply, press the 'Apply Filters' button and the catalog of the selected game will be filtered according to the criteria you have set.

If you prefer to delete the filter you have just made, you can press the 'Clean filters' button and the filter will be reset.

1.2 How can I register?

The registration process is really very simple: all you have to do is click on the 'Auth' button in the left-hand column:

Then in the form at the bottom right you will find a button marked 'Switch to Signup':

User Authentication

A screenshot of the 'User Authentication' form. It contains two input fields: 'Email' and 'Password'. Below the fields are two buttons: 'Login' and 'Switch to Signup'. A red arrow points to the 'Switch to Signup' button.

Click it and now you can now enter your e-mail address and a password of your choice. Then press "Signup" button:

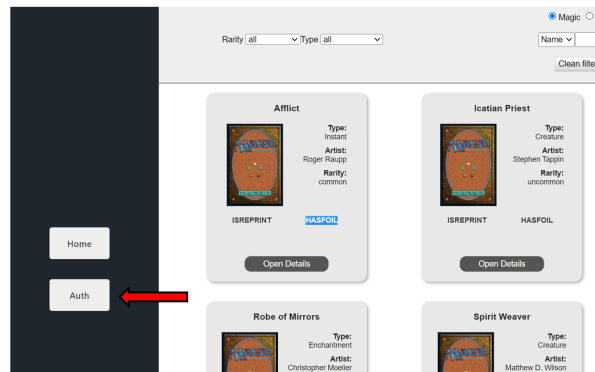

User Authentication

A screenshot of the 'User Authentication' form after clicking 'Switch to Signup'. The 'Email' field now contains the placeholder text 'insert your email here'. The 'Password' field is filled with eight asterisks. Below the fields are two buttons: 'Signup' and 'Switch to Login'. A red arrow points to the 'Signup' button.

You are in! Please note that you do not need to confirm your email and that the password only needs to be at least 8 characters long!

1.3 I am registered, how can I log in?

Don't worry, you're only a few steps away from being able to enjoy all the features of this website! You will have noticed that at the end of the registration process, the system will have logged you in automatically, but if you need to log in later, we will explain how you can do this with just a few clicks. First click in the area on the left where it says 'auth':

Now enter the e-mail and password you chose during registration and press the 'Login' button:

User Authentication

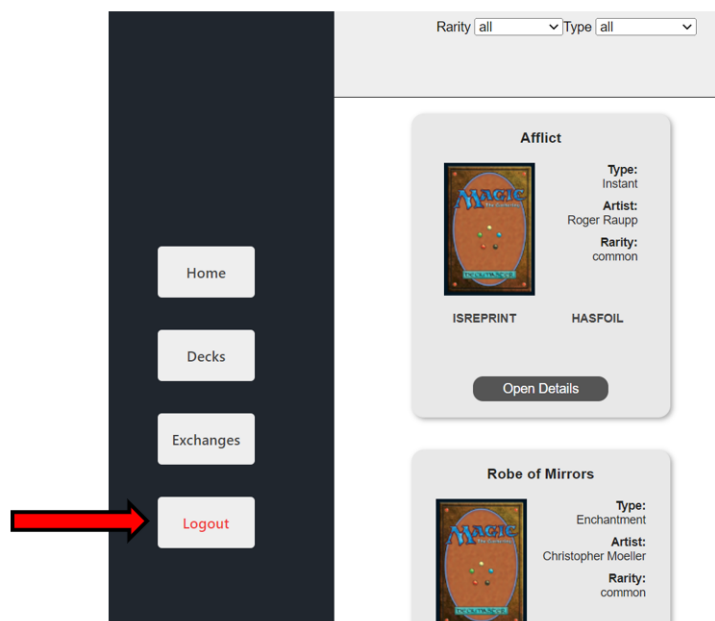

A screenshot of the 'User Authentication' form. It has two input fields: 'Email' with the placeholder text 'insert your email here' and 'Password' with masked characters '*****'. Below the fields are two buttons: 'Login' and 'Switch to Signup'. A red arrow points from the left towards the 'Login' button.

There you go: you are now logged into the system!

1.4 How can I log out?

If you are going to log off the site, the operation is really very simple and requires only a single step:

In the left-hand area, you have to click on the word 'Logout' and you will be directly logged out of the system:

There you go: you are now logged out of the system!

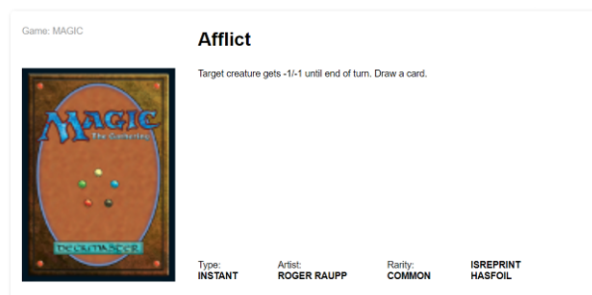

2 Manage your Cards

2.1 Add card to one of your decks

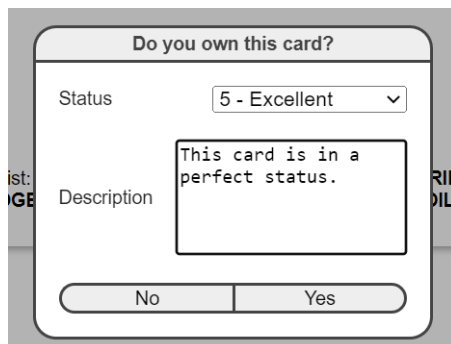

If you are logged in, when in the home after selecting one of the three games you have clicked on a card to see its details, you will find a menu in the centre of the screen marked "Select a deck" and a button:

If you select the deck you want to add the card to from the menu and press the button just to the right that says "Add Card", the card you are viewing will be added to the selected deck:

There is still one quick step left to complete the operation: Whenever you insert a card into a default deck ("Owned" or "Wished") you will have to indicate its status and you will have to indicate a description:

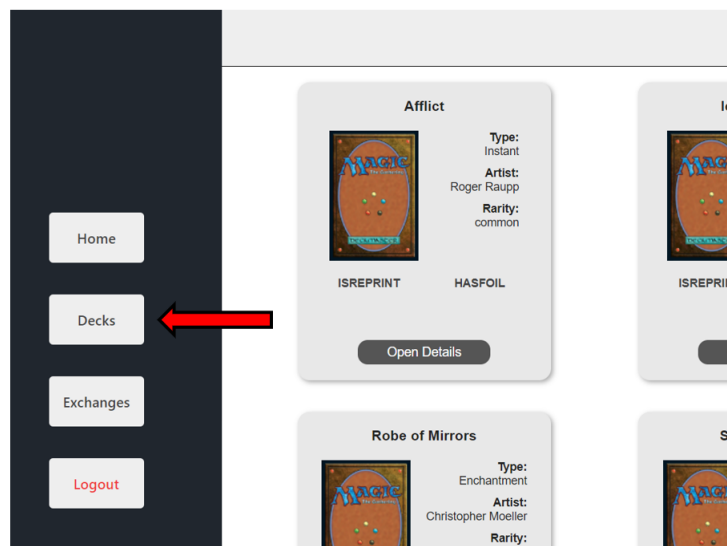

Now press "Yes" to confirm the operation. The default decks are two: 'Owned', where you enter the physical cards you own, and 'Wished', where you can enter the cards you want.

Then there are also the "custom" decks, which you can create yourself by deciding on a name and selecting one or more cards that you own, i.e. that you had previously placed in the "Owned" deck (for details on adding cards in "custom" decks, see "Create your first custom deck").

2.2 View your default decks

Hello SWENG site user! Now that you are registered and logged in, you can access the full potential of this app! If you click on "Deck" in the bar on the left:

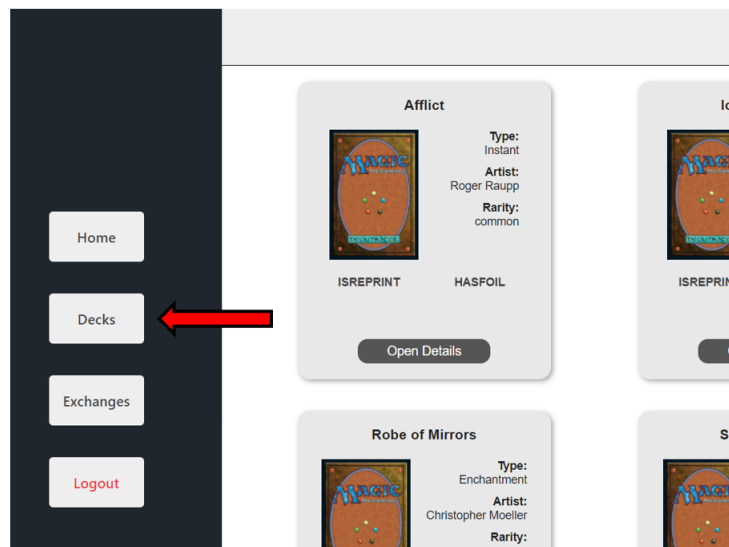

You will be teleported to the page where you can see your standard decks: "Owned" where you can see all of your owned cards that you have previously entered, and the "Wished" deck where you will see the cards that you do not yet own, but would like to own.

It is precisely here that the full potential of our app is expressed: soon your wishes will be granted because by indicating a card as desired, other users will be able to offer it to you in exchange.

While indicating a card as owned, other users who want it will be able to offer you an interesting exchange, perhaps even for one of the cards you want!

2.3 Create your first custom deck

If you are logged into the system, in the left sidebar press on the "Decks" button:

On this page you can see all your decks: at the top will be your default decks (Owned and Wished), which cannot be removed, while below them you will find any custom decks you have previously created.

To see the cards inside your decks, you can press the down arrow, right to the deck name, to expand it:

To create a new custom deck, simply click where the words "Write here your custom deck name" appear and type in the name you want to give the new custom deck, then click the check icon just right:

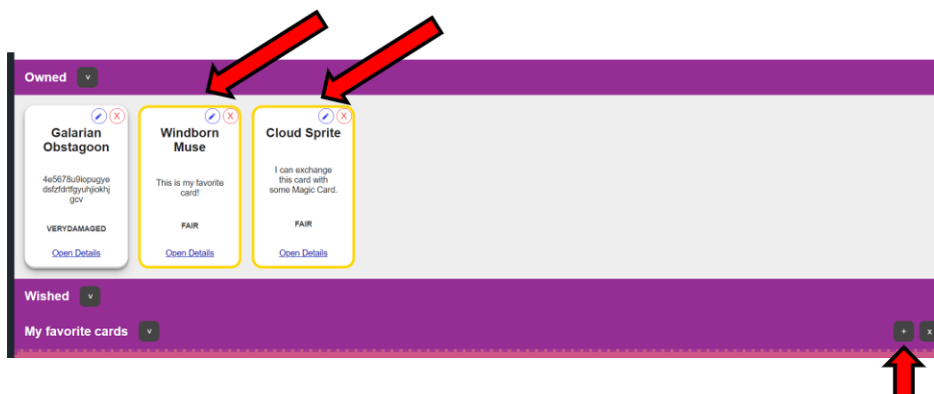

That's it! You've just created your first customised deck!

Remember: you cannot create two custom decks with the same name!

Need to fill with some cards your new custom deck? First of all, now you need to know how to select a card: just click on it. On the first click you will select it (it will be surrounded by a yellow background), on the second click it will be deselected.

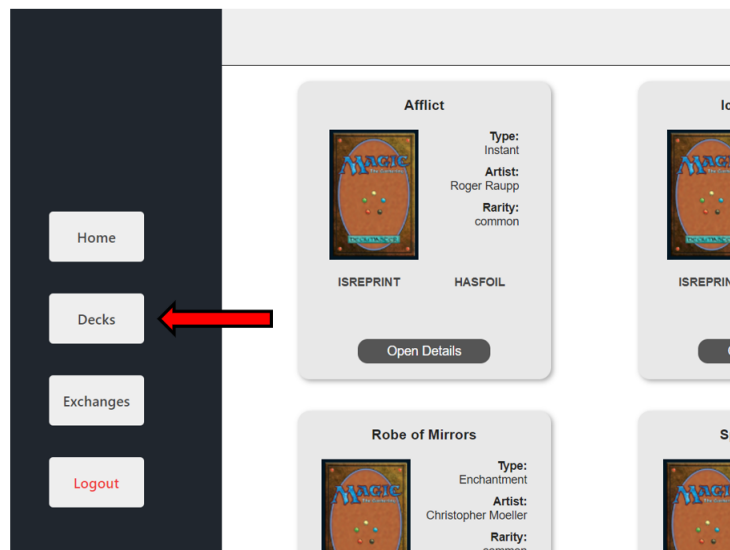

Now, if you want to add some of your owned cards to this new deck, select them from the deck of owned cards and press the "+" icon next to the custom deck where you intend to place them. The icon is all to the right, after the deck name:

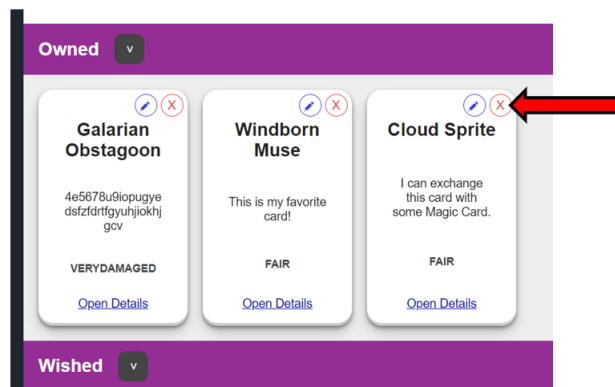

You can add also multiple cards in one click: Simply select several cards and proceed by pressing the "+" icon.

2.4 Remove card from a deck

If you are logged into the system, in the left sidebar you can find "Decks" button. Click on it!

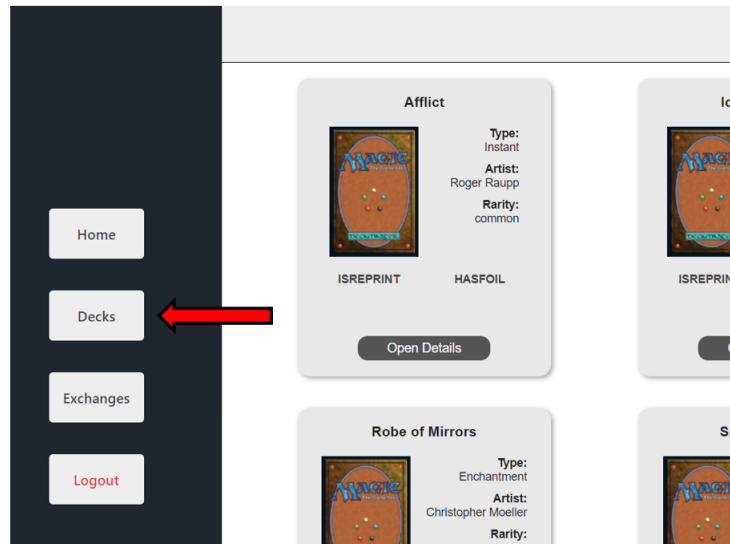

Expand the deck from which you want to remove the card by clicking on the arrow icon related to that specific deck. Identify the card to be deleted and press the "X" at the top right of the card and confirm the deletion:

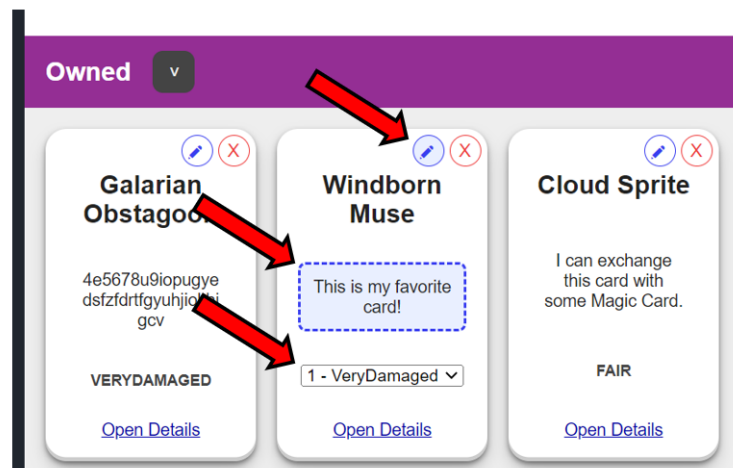

The card is now out of the system. Remember that if you need to add cards, you can see the "Add card to one of yours deck" section for inserting cards in the default decks (Owned or Wished) while there is the "Create your first custom Deck" section for the same operation in a custom decks.

2.5 Edit a card in a custom deck

To manage your decks you must of course be logged into the system. Then in the left sidebar press on the "Decks" button:

Here you can click directly in the top right section of your card, on a pencil icon. You now have the possibility to change the description and status of the card: the description is now surrounded by a blue dotted border, meaning that it can be edited. While the status has turned into a drop-down menu, where you can set a new status. To make the changes effective, you must press the pencil icon again:

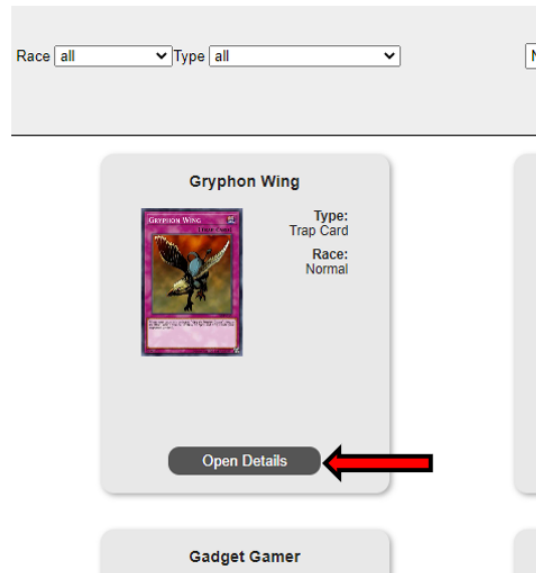

Just remember that if a card has been placed in a proposal, it is locked, thus not editable, until the proposal is resolved (cancel or rejected).

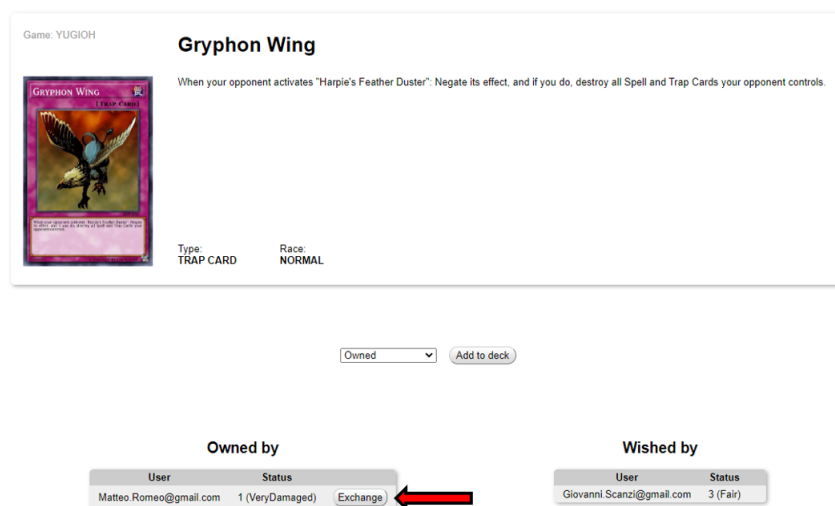

3 Try to Exchange

3.1 Propose an exchange

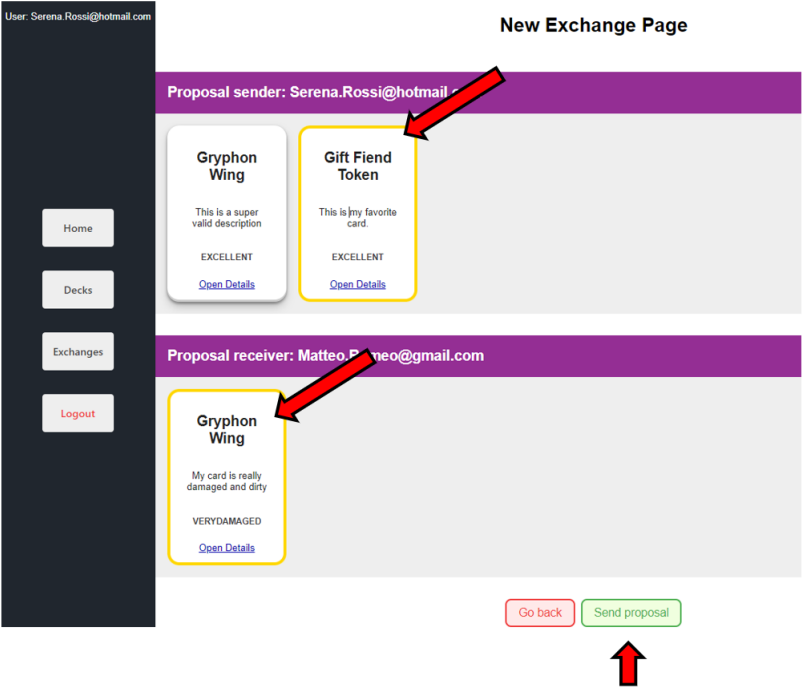

To propose an exchange between one or more cards to another user, you must of course be logged into the system. Select on the home page a card that you wish to receive or that you own and wish to exchange. By clicking on it you enter the details:

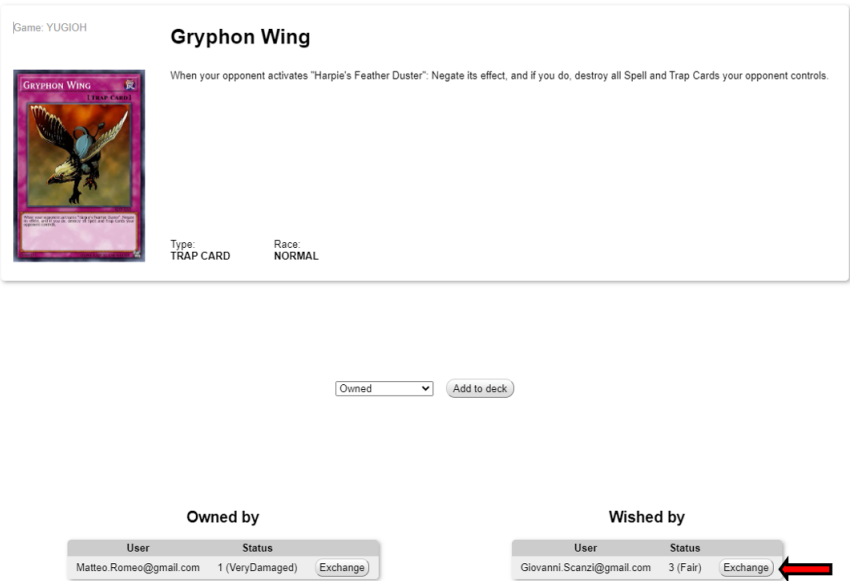

From there then begin to create the exchange proposal. If the card you select is the one you want, in the first list you will see a number of users who own it. By clicking on the "Exchange" button, you will be taken to a page to finalize the proposal:

Here then select the cards you are offering in exchange, other cards you would like to receive owned by the other user with whom you are negotiating the exchange. When you are satisfied with the cards offered and requested, press the green button ("Send proposal") and the proposal will be generated and sent, after clicking OK on the confirmation window:

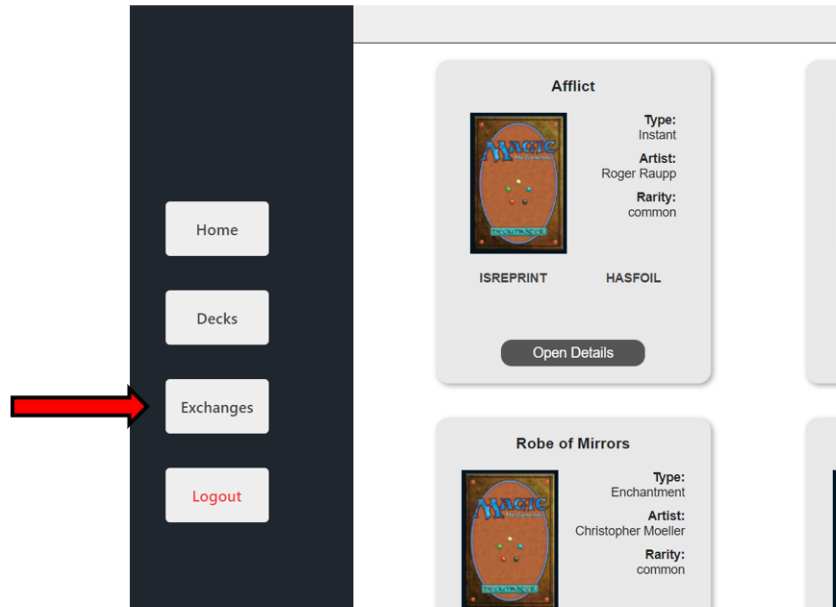

If, on the other hand, the card you were looking at the details of was a card you own and wanted to exchange, you will find in the right column all the people who have selected that specific card as desired. If the status in which your card is in is compatible with the status in which the card is desired by the other user, the exchange button will be enabled and you can proceed to formalize the request, in the same way as described a few lines above:

3.2 Manage an exchange proposal

If you are logged into the system, there is an "Exchange" button in the left area:

If you press it you will be redirected to the exchange area, where you will find two lists: the list of exchanges that you have proposed, awaiting acceptance or rejection, and a list of exchanges for which you are the recipient:

User exchange proposals

From you			To you		
ID	Date	Receiver	ID	Date	Sender
2	15/02/2023	Matteo.Romeo@gmail.com	No proposals		

By clicking on the line you are interested in, you can delete an exchange by clicking the red button ("Cancel Proposal"), or accept it by clicking the green button ("Accept Proposal") an exchange that has been proposed to you. If you accept an exchange, but the cards that are the subject of the exchange are no longer available, you will be notified of the problem and the exchange will be automatically cancelled:
